TeXfrWpxml Overview

TeXfrWpxml is a J script that that extracts all published blog postings from WordPress export XML files and converts them, using [pandoc](#), to \LaTeX and markdown files that are then used to build [PDF](#), [EPUB](#), [MOBI](#), and [AZW3](#) versions of a blog.

Using TeXfrWpxml is described in a series of blog posts:

1. <https://analyzethedatanotthedrive1.org/2012/02/11/wordpress-to-latex-with-pandoc-and-j-prerequisites-part-1/>
2. <https://analyzethedatanotthedrive1.org/2012/02/18/wordpress-to-latex-with-pandoc-and-j-latex-directories-part-2-2/>
3. <https://analyzethedatanotthedrive1.org/2012/02/25/wordpress-to-latex-with-pandoc-and-j-using-texfrwpxml-ij-s-part-3/>

TeXfrWpxml Interface

BlogHashes	[12]	<i>update blog hashes</i>
FixBaddown	[13]	<i>attempt to convert *.baddown files to *.markddown</i>
LatexFrWordpress	[14]	<i>experimental conversion of Wordpress XML to LaTeX</i>
MainMarkdown	[16]	<i>assembles *.markdown files in EPUB directory in a master file</i>
MarkdownFrLatex	[17]	<i>converts edited LaTeX post files to image free markdown</i>
countYearposts	[25]	<i>adds post counts to table of content lines</i>

TeXfrWpxml Notes

TeXfrWpxml is at the mercy of WordPress's XML export format. This format has changed, without warning, many times during the last decade. Most changes do not impact TeXfrWpxml but in the last two years I've hit changes that do. This is a sign that TeXfrWpxml is nearing the end of it's life. I've been thinking about modifying or replacing the program, but if I take such a step, I will rethink my use of WordPress. The service is not entirely friendly to technical material, and is lagging well behind competitors in support of programmer friendly features like defining your our source code highlighting. For now I will note the changes that force me to tweak TeXfrWpxml if I see too many to forgive I will revisit this issue.

1. 20apr01 CDATA now used for blog post titles.

TeXfrWpxml Source Code

```

NB. *TeXfrWpxml s-- LaTeX source from WordPress export XML.
NB.

NB.*MarkdownFrLatex v-- converts edited LaTeX post files to image
NB. free markdown.
NB.
NB. This verb converts edited *.tex files into *.markdown which
NB. are then used to build an EPUB. The markdown requires a small
NB. bit of editing, mostly to cleanup the odd LaTeX fragment that
NB. Pandoc does not convert. This is nowhere near the chore that
NB. editing the WordPress CDATA HTML to *.tex is and has the nice
NB. feature of preserving all the corrections made to the *.tex
NB. files.
NB.
