TeXfrWpxml Overview

TeXfrWpxml is a J script that that extracts all published blog postings from WordPress export XML files and converts them, using [pandoc](#), to L^AT_EX and markdown files that are then used to build PDF, EPUB and MOBI versions of a blog.

Using TeXfrWpxml is described in a series of blog posts:

1. <https://analyzethedatanotthedrive1.org/2012/02/11/wordpress-to-latex-with-pandoc-and-j-prerequisites-part-1/>
2. <https://analyzethedatanotthedrive1.org/2012/02/18/wordpress-to-latex-with-pandoc-and-j-latex-directories-part-2-2/>
